

TC-RAIL28-EX12 28" Rail System
for EX1M4 and EX2M8 Rackmount Chassis

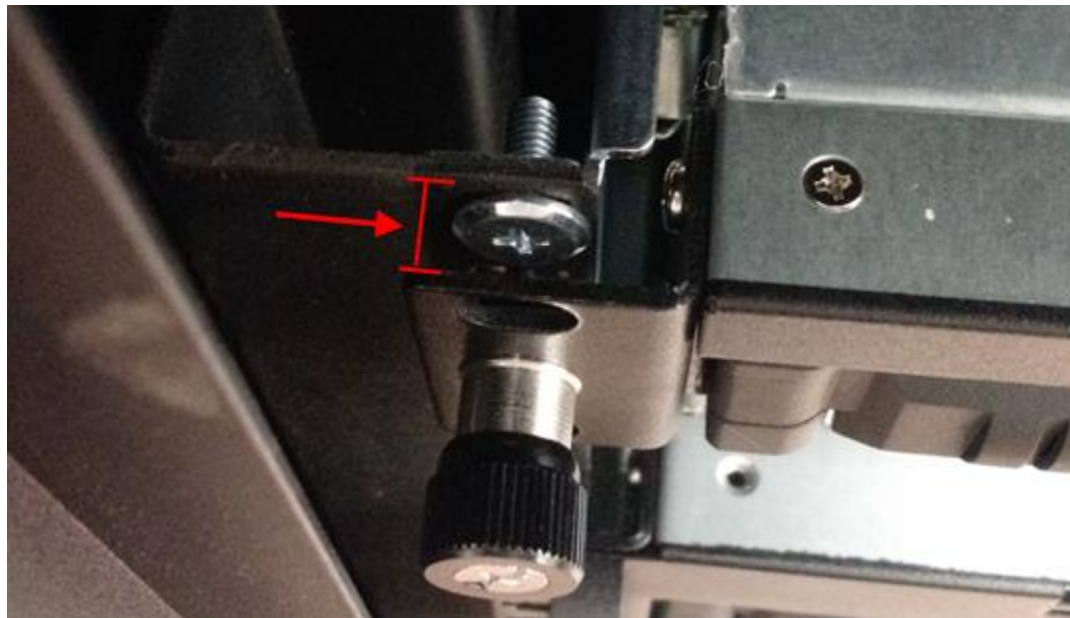

The minimal mounting distance is 29". See 2nd page for more details

The minimal mounting distance can be 27.5" when only using 2 screws to secure the rear L bracket. Not recommended.

If mounting posts distance is 29" or under, ensure the spacing between L bracket and rackmount flange is **no bigger than $\frac{1}{8}$ "** (can be zero), otherwise chassis cannot be secured to cabinet's mounting posts. See below image

If the spacing is bigger than $\frac{1}{8}$ ", chassis cannot be secured to cabinet due to too much spacing between L bracket and rackmount flange.
